PROFESSIONAL SUMMARY

Software Quality Assurance Engineer with a B.Sc. in Software Engineering and hands-on ownership of quality across 10+ live SaaS products in e-commerce, grocery, food delivery, ride-sharing, property and point-of-sale domains. Experienced in end-to-end manual testing of websites, admin panels and customer, seller, rider and driver mobile apps; REST API testing with Postman; and root-cause bug analysis that has caught checkout, payment and notification defects before release. Brings a year of software issue investigation and team leadership from a client-facing support role, plus direct codebase experience fixing defects and building features on a POS product. Currently completing the Full Stack SDET program (Playwright, API automation, K6, CI/CD).

CORE COMPETENCIES

- **Testing:** Manual, Functional, End-to-End, Regression, Smoke, Sanity, Exploratory, Retesting, Cross-Browser, Mobile App (Customer, Seller, Rider, Driver apps), Admin Panel / CMS, Client Requirement Verification
- **API & Data:** REST API Testing (Postman), Response Code & JSON Payload Validation, Business Logic Validation (fees, commissions, payments), MySQL (basic SQL)
- **QA Process & Documentation:** STLC, SDLC, Defect Life Cycle, Requirement Analysis, Test Case Design, Bug Reporting, Root-Cause Analysis, Severity & Priority Classification, Release Triage, Developer Collaboration
- **Tools & Automation:** Postman, Git / GitHub, MySQL, JavaScript (basic), AI-assisted development tools; Playwright, Newman, Mocha and K6 (in progress through the SDET program)

PROFESSIONAL EXPERIENCE

Junior SQA Engineer | RazinSoft

Aug 2026 - Present

- Own end-to-end quality for 10+ live SaaS products (ReadyEcommerce, ReadyGrocery, Ready Restaurant, ReadyRide, ReadyPOS, RentDo and white-label client builds), testing each as one connected system across the website, admin panel and customer, seller, rider and driver mobile apps.
- Validate complete business flows on every release, from product listing, cart, checkout and payment through seller acceptance, rider delivery and admin reporting, and from ride request and driver assignment through trip completion, payment and driver earnings, so every user role is proven to work together, not just in isolation.
- Perform REST API testing in Postman to validate response codes, JSON payloads and backend business logic such as fee and commission calculations.
- Write developer-ready bug reports with reproduction steps, root-cause analysis and Critical / Major / Minor / Low severity plus priority, flagging checkout-blocking and payment defects as Critical so releases are triaged quickly.
- Found and documented high-impact defects, including checkout totals not syncing with live cart updates (ReadyEcommerce); missing push notifications for in-ride chat and order payment status not updating after delivery (ReadyRide); driver earnings breakdown not displaying in the driver app; and non-functional call-to-action buttons traced to missing link fields in the admin CMS, a recurring issue across multiple products.
- Verify client-customised deployments of the ride-sharing and e-commerce platforms, including builds for clients in the UAE, Kuwait and Saudi Arabia, against each client's own requirements end to end before handover.
- Retest every resolved defect across releases and review requirement and admin / seller workflows to catch functional gaps before they reach production.
- **ReadyPOS:** after end-to-end testing and bug reporting, took codebase access and resolved defects directly in a dedicated QA branch, built new business-driven features and refined the UI, delivering a customer-ready POS system; used AI-assisted development tools to implement and verify changes.

- Performed manual and functional testing on live client projects under senior QA guidance, applying STLC practices from test execution to defect reporting.

Software Support Executive → Interim Team Lead → Support Team Lead

- Investigated, reproduced and documented client-reported software issues, turning vague complaints into clear technical findings with steps and evidence that developers could act on.
- Acted as the bridge between clients and the engineering team, prioritising issues by client impact and coordinating with developers on resolution.
- Promoted twice within 12 months, from Software Support Executive to Interim Team Lead to Support Team Lead, leading the support team's daily operations.

KEY PRODUCTS & PROJECTS

- **E-commerce & Retail:** ReadyEcommerce (multi-vendor marketplace), ReadyGrocery, a single-vendor online store, a PC-build and computer-accessories e-commerce platform for the Kuwait and Saudi market, and white-label client stores for the UAE market. Website, Admin Panel, Customer, Seller and Rider Apps.
- **Food Delivery:** Ready Restaurant, FoodGet. Website, Admin Panel, Customer, Restaurant and Rider Apps.
- **Ride-Sharing:** ReadyRide and client-customised deployments. Website, Admin Panel, Rider and Driver Apps.
- **Property Marketplace:** RentDo (buy, sell and rent). Website, Admin Panel, Customer and Seller Apps.
- **Point of Sale:** ReadyPOS. End-to-end QA plus hands-on defect fixing and feature development in the codebase.

TRAINING & CERTIFICATIONS

- **Full Stack SDET Program, Road To SDET** (Oct 2026 – Ongoing, 20 modules): Manual Testing, API Testing & Automation (Postman, Newman), MySQL, JavaScript, TypeScript, Node.js / Express, Next.js, Docker, System Design, Performance Testing (K6), Linux, Security Testing (Burp Suite), AWS Basics, UI & API Automation with Playwright, CI/CD; concludes with an industry-grade capstone project.
- **Introduction to Software Testing** – Completed Apr 2022

EDUCATION

Bachelor of Science in Software Engineering

Graduated 2023

Daffodil International University | CGPA: 3.60 / 4.00
